Re: GA POST OPERATIVE INSTRUCTIONS

His/Her mouth will be numb for 2-3 hours, make sure he/she does not bite her lips or cheeks.

Pain is normal for a few days post operatively.

Bleeding is normal for a few days post operatively.

His/Her bite may feel different for 7-14 days.

3-4 ounces of water upon arrival at home, providing he/she is awake and alert.

3-4 ounces of water after 30 minutes of the initial water intake provided he/she did not vomit. If he/she vomits, wait 30 minutes additional and provide water again.

Soft foods 30 minutes after the second water dose--if he/she requests it. Eating is not necessary immediately if he/she doesn't request it.

Tylenol may be given after one hour of arriving at home if needed for pain.

Limit physical activity for today.

May resume activity tomorrow.

Soft foods for the remainder of the day.
